

ABC's of Drawing a Kitchen Layout

A bird's eye view is sometimes the easiest format to make a plan of your kitchen. Remember to record countertop dimensions along the back wall for measurements. Hand drawn is as easy to understand as computer generated.

- Draw a box indicating the room perimeter and overall wall dimensions.
- Loosely place your countertops and appliances (include details/models if available) and fill in the backwall dimensions of the countertop and add dimensions of appliances. Detail where your sink is located.
- Please include your name, email, tel# and city
